

How do I measure my unit to find out how many skirt panels I will need?

The nice thing about our Patented skirts is they are not manufactured for one specific RV; they were created as a universal skirt panel that you adapt to fit your unit.

All you need to do is calculate the total circumference of the area you would like to enclose with our Patented Skirt Panels, then purchase only the quantity you need in linear footage that works best for you.

The easiest way to do this is, take your total footage needed to enclose your unit and divide it by 9.5 and/or 4.5. **Include the slide out portion.**

Once you find out the required amount for your unit, please go onto our website and place it into your cart, it will provide you the exact cost including shipping and tax if your state requires us to on the sale.

(Example; my RV's total circumference with the slide-outs extended on my fifth wheel is 88 feet, I first divided it by 9.5 which stated I would approximately need 9.26 skirt panel, well since the skirts come in 48"x60" (4-foot by 5-foot) 48"x120" (4-foot by 10-foot) 82"x32" (6.5-foot by 2.6-foot) or 82"x120" (6.5-foot by 10-foot) I determined that I would get 2 of the 82"x120" for the front, 7 of the 48"x120" & 1 of the 48"x60" skirt panel which gave me a usable length of 96 feet)

Remember you make it work for your needs, if it's a little tall customers will roll the skirt up from the back side and place plastic spring clamps to hold it in that position, kind of like hemming up pants that are a little long, then re-attach it back to their unit, others go as far as taking them to a local upholstery shop and having them sew it. The great thing is, you do what's best for you.
